SKILLS

Languages: Java, Bash, Windows script, JavaScript, PHP, Python, SQL

Databases: MySQL, MongoDB

Frameworks: Spring Boot, Tomcat, Zend, React JS, Node.js, PHP Unit, JUnit

Developer Tools: Git, OCI, AWS, Windows Server, Puppet, Docker, Bamboo, Splunk, Elasticsearch, Nginx, Kafka

EXPERIENCE

Sr. IAM Engineer

Apr 2025 – Present

GreenThreads LLC - U.S. Dept. of Veterans Affairs (contract), Identity Access Management

Remote

- Modernized the token system used by 10 million users that translates tokens to determine access. Upgraded Java, Tomcat, Spring boot and javax packages to remove security vulnerabilities and CVE risks
- Overhauled system infrastructure by migrating logging framework from Log4j to Logback and upgrading distributed caching to JCache standards
- Managed PKI certificate updates and user domain access rules to secure internal token translation services

Senior Software Engineer

May 2022 – Feb 2024

Synacor Inc.

Buffalo, NY

- Architected Consumer Identity and Access Management (CIAM) solutions to handle 10 million users, serving 15 million requests during peak hours to content providers including HBO, NFL and Peacock. This involved authentication in PHP with SAML 2.0 and authorization in Java using OAuth 2.0, OpenID Connect
- Led a team of 4 engineers and organized migration of a repository of Perl scripts, from data center to Oracle Cloud Infrastructure (OCI), created VMs, deployed services and tested performance, saving \$100,000 a month in infrastructure cost
- Migrated 3 million users' data to real-time, highly available and fault tolerant Java REST APIs microservice, using Hystrix library for users of Telus, Breezeline, Windstream and Astound
- Deployed a load testing mechanism, to test API requests against production and pre-production servers, using Bash scripts, in order to provided statistics such as percentage of successful and failed requests and rate of success
- Saved 1 hour of query time by creating Splunk dashboard to track authentication and authorization statistics, using automated log parser and Splunk consumer in Bash
- Provided Tier-3 on-call support for critical escalations, diagnosing PHP/Java/HTTPD logs and database entries to resolve emergency issues within 24-hour SLAs
- Followed Scrum practices of Agile methodology in a 5 person team, like sprints, ceremonies, story creation, task estimation and ticket pipelines for an efficient SDLC

Software Engineer II

Aug 2018 – May 2022

Synacor Inc.

Buffalo, NY

- Built a release runway and deployed a SaaS on-boarding service for seamlessly provisioning orgs and API keys, with React and AnularJS, saving 5 hours of client coommunication
- Engineered TV Everywhere SSO integrations supporting 8–10 million users using SAML 2.0 and OAuth 2.0 protocols for providers including Apple TV, YouTube TV, AT&T, and content providers HBO, Peacock and STARZ
- Developed custom log processing parsers capable of parsing hundreds of MBs of microservice logs for SiriusXM to extract operational telemetry
- Improved efficiency of Zimbra server installations by 20% by performing health-check analysis, using Bash scripts to gather server usage statistics, and making improvements based on them
- Designed a CI / CD pipeline using Bamboo and Puppet to automatically test, promote and deploy a Linux RPM to testing environments and set up cron jobs on servers for running services in the package

EDUCATION

University at Buffalo

Buffalo, NY

Master of Science, Computer Science and Engineering

Aug 2014 – Feb 2016

University of Mumbai

Mumbai, India

Bachelor of Engineering, Computer Engineering

Aug 2010 – Aug 2014
